9 Days / 8 Nights in Total on Full Board

Accommodation as listed above or similar

SERENGETI EXPERIENCE

The Serengeti ecosystem is a geographical region in Africa, spanning northern Tanzania and some of southwestern Kenya. The protected area within the region includes approximately 30,000 km² of land, including the Serengeti National Park and several game reserves. The Serengeti hosts the second largest terrestrial mammal migration in the world, which helps secure it as one of the Seven Natural Wonders of Africa, and as one of the ten natural travel wonders of the world.

The wide open plains of the Serengeti – green after the rains, brown and burnt in the dry season – are home to thousands of hoofed animals and fierce predators. Flat and rolling, with long grass and acacia trees, these plains get their name from the Maasai word Siringet – 'The place where the land moves on forever'. It is perhaps more renowned for being part of the stage on which the annual Great Migration plays out, where over two million wildebeest, a fair number of gazelles, and small following of zebra seek better grazing areas. In August we stand a good chance to see the Great Migration on our way across the plains.
